

One time treatment...

Enviro

-SAVE

TYRAN Transport Ltd.

Tyran Transport is in the process of applying Co2 reducing treatment to the bulk of their fleet of trucks, graders, trailers, farm machinery, brush mulchers, excavators, loaders, pickups, gravel crusher, etc.

Once the majority of equipment has been treated with ENVIRO-SAVE Metal Treatment, the Company should save over \$23,000 per year in fuel costs alone, also resulting in an annual reduction of over 124,000 lbs or 62 tons of Co2.

As the resulting extension of operational life and fuel saving is caused by wear reductions averaging 50% the cost of treatment is small when compared to the benefits.

"Reducing our Carbon Footprint, and Greening our fleet will save us money in fuel costs, repair costs, down time and unit replacement time lines" said Elvern. "Lowering our capital and operating costs will allow us to be more competitive in the industries we operate in, as well as improving our bottom line."
