Subject: Isolation Equipment Services Testimony (Envirosave)

To whom it may concern,

My name is Josh, and I am the Fleet Manager for Isolation Equipment Service's in Alberta, Canada. I have been in the oil and gas industry for well over two decades, and hold a Journeyman Red Seal status in both Automotive and Heavy Equipment Technician trades. Let me first say that I am completely blown away on how well EnviroSave has worked for my fleet of Units. As a whole we have put EnviroSave additive into 50 plus units which include our fleet pickups, picker cranes, and skid power pack units. What I have seen thus far is nothing but exemplary service and an extraordinary product. IES has used EnviroSave for the last decade on all of our assets that have an internal combustion engine, gas/ diesel.

I have noticed a difference in fuel consumption, and an overall extension of service life on IES equipment. Specifically our hydraulic power packs that are operated 24 hours/day for day upon end. The equipment performance has been extremely good, we are certain, barring the harsh conditions, startups in sub temperatures, that we have saved a significant amount of time and resources on maintaining this specialty equipment. Most notably are the ten 250 -375 HP pumpers that were treated with EnviroSave from their inception (Circa 2015). These specialty units are expected to operate from idle to maximum HP for minutes at a time, then back to idle 24/7. This type of operation is borderline abusive because the engine temperatures are not optimum at maximum torque. Even though, the engines have performed to their full extent, for over 20,000 hours and continue to exceed my expectations. EnviroSave Works!

Thank you!

Josh Pohl
