

Common Sense Cost Reducer & Profit Enhancer

Enviro-Save pays for itself over and over and provides a Return On Investment into the 1000's% + over time.

It saves you money in so many ways, more than any other product. This 1 time application has an impeccable proven track record like no other. No failures since 1990 and it will not void warranties.

Enviro-Save is used in 100's of applications

From Semi Trucks

*Common Semi Truck Fuel Savings 6% to 9%
Auto's 10% to 15%*

To Refrigerated Trailers

The results are Guaranteed!

Performance Enhancer

More Horse Power by reducing friction, drag and wear, Ford Motor test confirmed 5.28% increase in HP, many auto and motorcycle racers confirm an increase in HP and faster time. Class 8 truck drivers report more HP after going up hills in a higher gear. More HP and longer life!

Environment Protection

From Farm Equipment

- *Less Exhaust Pollution*
- *Less Fuel / Oil Consumption*
- *Longer Life*

To Motor Yachts

- *Less Oil In Water*
- *More Efficient*
- *Safety Factor*

From Work Trucks to Land Movers

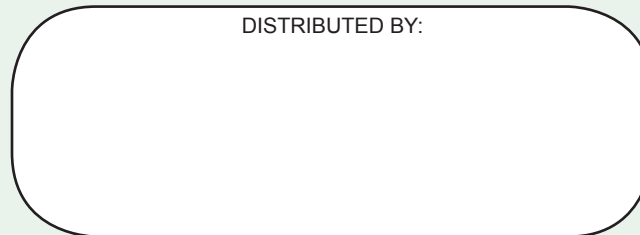

*It works in all of them & more...
Lawn Mowers-Pressure Washers*

Common Sense Cost Reducer You will not be disappointed

*Saving Energy and the Environment
for the Next Generations*

Enviro
-SAVE®

What is it, what does it do?

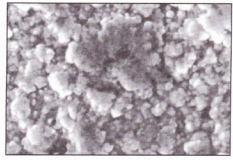

Figure 1: Top View

Pictures of a new crankshaft engine bearing magnified 4500 times, the rough bearing surface asperity appears to be extremely smooth to the naked eye.

Figure 2: Cross Section

There are only 2 ways to reduce friction, drag & metal wear rates in lubricated mechanical components:

- 1) Use better lubricants
- 2) Make the bearing surfaces smoother = **Enviro-Save**

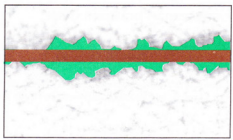

Figure 3: Resin Filled

Cleans and impregnates bearing surfaces, it's like cleaning the pores of your face and then using a protection cream.

Enviro-Save is not a repetitive oil additive!

Common Sense Cost Reducer Enviro-Save Metal Treatment

Enviro-Save proprietary products were designed and formulated by Lubrication & Mechanical Engineers, a Tribologist, Veteran Engine Rebuilders and Mechanics so there are no risks while achieving the maximum performance possible. Mechanical Engineers who have analysed **Enviro-Save** have stated "it has no competitors"!

This 1-Time Investment & Application provides many proven financial benefits for you and continues for the life of any vehicle or component, the Return On Investment runs into the 1000's of % percent.

Unlike others, Enviro-Save's 50%+ reduction in engine metal wear is confirmed by indisputable Scientific Oil Sample Analysis (which was perfected by the USA Military). It's like the Doctor having your blood sample analysed.

Friction Causes Wear, prove wear has been reduced with Oil Analysis automatically confirms friction has been reduced, less friction requires less fuel = less pollution and more available horsepower etc. Friction; the major cause of engine, transmission, differential and hydraulic wear and tear, is reduced by Enviro-Save along with heat, metal fatigue and noise. Common to extend normal component life by 2 to 3 times once the permanent Resin Impregnation Process has been completed.

You will not be disappointed!

Common Sense Pollution Reducer

It has never made more sense to **GO GREEN** and get serious at reducing pollution for future generations! Since 1990 Enviro-Save has been reducing global pollution in many ways; Reduced fuel & oil consumption = less pollution, Restored engine cylinder and piston ring efficiency = less pollution,

extending component life = less pollution, Reducing friction in electrically driven machinery = less pollution and by Safely extending oil change intervals = less pollution – proven with Oil Analysis. Government automobile exhaust pollution testing normally confirmed 50% to 80% less pollution, especially in older automobiles. Cleans and treats fuel injectors, improving performance and reducing pollution.

Common Sense Life & Dependability Enhancer

If you want to avoid buying new automobiles, trucks, equipment, lawn mowers, ATV's, motorcycles, weed eaters, etc then use Enviro-Save, it restores efficiency and 1 application normally doubles or triples life.

Scientific Oil Sample Analysis confirms these facts and we have a V8 gasoline engine with over 840,000kms on it, with very little wear. Ford Motor 160,000km test; untreated engine wear was 2 to 3 times higher than the treated.

Treated vehicles and equipment are more dependable and reliable, especially in extremely cold and hot temperatures. Engines rotate faster for quicker starting increases starter life etc. Affords excellent protection when unexpected loss of oil or coolant occurs and has saved many engines and transmissions from disintegrating in commercial trucks, RV's, racing vehicles and marine vessels.
